

FRUIT 'N NUT 2011

Our chosen varieties are selected for their history of producing well and maintaining high health. Most of our young fruit trees have been grown in our open-ground nursery using natural methods, where there is no use of chemical pesticides or artificial fertilisers. Some plants are bought in from other nurseries and we do not have details of their growing practices. Potted plants (in PBs) have a slow release pellet fertiliser in their mix.

Please specify if you prefer only organically grown plants.

NOTE	CODE
OG (bare rooted) plants are available in winter from July through to late August only. They can be ordered any time.	med medium sized fruit.
PB & RT stock available most of the year, ie Chilean guavas, edible Holm oaks, feijoas, lemons, olives, pinenuts and pomegranates.	mid fruits in middle of fruiting season for that plant.
Other new season plants become ready from October through to April depending on variety.	OG grown in open ground, bare rooted.
	PB grown in plastic planter bag.
	POL pollinator for that variety.
	PVR protected from duplication by Plant Variety Rights & incurs a royalty fee.
	RT grown in root trainers.
	SF self fertilising.
	S/O sold out for this season.

APPLES OG (sold bare-rooted mid June to August) PRICED ACCORDING TO GRADE \$16 - \$24
Grades according to availability

Our apple stocks are 1 and 2 year olds from 75cm to 1.7m+ tall and are available in varying numbers so order early to get the variety you prefer. All apples are sold bare-rooted unless requested otherwise. Potted price is plus \$2.50. Apples need another apple as a pollinator and this can be over about 30 metres, or 100 feet. Any neighbourhood tree will do the trick. Apples fruit within 3 to 6 years or less.

ROOTSTOCKS - We have 4 different rootstocks

Em9, M27, MM102 (larger) - **Dwarf** rootstock, virus resistant, ideal for home gardens, early bearers growing 2 to 3m tall.

MM106 - **Semi-dwarf** rootstock produces a medium sized tree 3 to 4m (+ in Taranaki) with a short time until bearing. Ideal for home gardens and suitable for cordons and espalier. Resistant to woolly aphid.

793 - Modern rootstock bred from Northern Spy, produces a **large tree** & is hardy especially on free draining soils.

Most apples are on the MM106. Rootstocks for specific varieties are available as listed while stocks last.

VARIETY	CHARACTERISTICS	ROOTSTOCK
Ballarat	Large green red blush, white flesh, vigorous, abundant, late, cooker, stores well, healthy.	106
