**Tree lucerne**  
(Tagasaste)

Te Kahuri Stock and Pricelist October 2023  
Fast growing, early spring flowers, attracts Kereru, nitrogen fixer,  
nurses less hardy young plants, stock fodder tree.

**Tube 4.00**

**NB: Plant prices and grades as listed are subject to change without notice**  
**BASIC PRINCIPLES OF SHELTER**

- 1) **Porosity** Shelter should slow the wind not stop it altogether.  
Very dense belts such as bamboo dump the wind on the lee side.
- 2) **Height** Preferably as tall as the site allows. Shorter to the north of buildings, sheds, tracks and farm crossings or similar sites to avoid too much shading.  
Deciduous trees can provide excellent shelter and shade in late spring, summer and autumn and let the light through in the winter.
- 3) **Continuity** Make belts as continuous as possible (gateway wide gaps are okay) to avoid wind accelerating through the gaps and around the ends of the rows.
- 4) **Spacing**  
**Formal trimmed hedges** 0.3 – 1m high 4 - 6 plants per metre  
1m – 2.5m 3 plants per metre  
**Farm or horticultural shelter** 1 plant per metre  
**Timber belts – single row** 1 plant per 2 – 3 metres = 333 – 500 per km.  
**– double row** 2m x 2m or 2.5m x 2.5m = 800 – 1000 per km.

PVR protected from duplication by Plant Variety Rights & incurs a royalty fee.

**Plants in PBs** (planter bags) available all year round

**Note: OG\*** Open ground, bare rooted plants are available from July through to late August only.
